Delonghi radiant heater reviews

8.7 Created with Raphaël 2.1.28.7010 Overall BVR Rating Based on 1,208 reviews Controls and functionality So, this was my first review: Please read down the the UPDATE. The unit got much better after the first power cycle.We understand this radiant heat, not an air heater, but it's not getting the job done.We put this in our office, where the three of us live most of the day, so we could turn off the house heat.Even set at 80, my wife, 6ft from the heater is still cold.Prior to this, we were using a forced air heater at about 65-67 deg. I'm wondering if we can mod this heater to remove the side fences and maybe the heat will reach further...Anyone have experience with that?UPDATED: MUCH IMPROVED PERFORMANCEAfter three days continuous running, we decided to power down the unit, flip it over, and examine how the side fence is connected to the unit, to see if we could simply unbolt it. Well the "fence", as I call it, is integral to the unit itself, it does not unbolt. Okay. So we flip the unit right side up, plug it back in and power it back up. Within an hour it got quite hot. Now the unit is keeping this room quite warm. In fact, you can feel the heat down the hall approaching this room.I cannot explain why the performance improved after the power cycle, but it did. Perhaps customer support or an engineer can chime in here and say why the second time 'round the unit got much hotter.So, when the unit finally got hot, it gave off a bit of an odor. Not a real bad odor, but, ironically, it smelled like something new, metal and hot. After a few hours the odor dissipated. Now the odor is completely t's gone.Other than that, we've noticed a few tiny "ping" "pop" noises when we first power up the unit. No surprise there. If room wasn't quiet, we would not have heard them. Maybe four or five pings the first two minutes of power. After that, the unit is silent. I mean, it's really quiet. If you're considering a radiant heat unit like this to replace a loud ceramic space heater, you could do much worse. I love how quiet this unit is... I mean, it's silent.And it's getting the job done. This office we live in most of our waking hours is comfy cozy warm. You don't really notice that the heater is running, you're just comfortable. You don't hear it, and you don't feel a hot blow or hairdryer effect on you like the ceramic heater or the central forced air. You only notice when you leave the room, get cold, and run back to the comfort of this warm office.If you read this review a week ago, I hope you've also read this update.I may buy a second unit for the cavernous master bath in this house.Returning to this review a few years later, I now own five of these units and I'm ordering two more today. We no longer boil water on the stove to keep the air comfortable in the house, because we're not subject to the hot dry air of our central forced air system. I've got one unit in each bedroom, one in the master bath, and one in the office. Today I'm ordering two more for the cavernous den, one for each end of the room. © 1996-2014, Amazon.com, Inc. or its affiliates Skip to content Last updated date: January 25, 2019 Why Trust DWYM? DWYM is your trusted product review source. Along with our in-house experts, our team analyzes thousands of product reviews from the most trusted websites. We then create one easy-to-understand review. Learn more. Look for the DWYM seal for products that are the best in the category. We looked at the top Space Heaters and dug through the reviews from some of the most popular review sites. Through this analysis, we've determined the best Space Heater you should buy. Update as March 28, 2022:Checkout The Best Space Heater for a detailed review of all the top space heaters. In our analysis of 59 expert reviews, the DeLonghi Full Room Radiant Heater placed 18th when we looked at the top 18 products in the category. For the full ranking, see below. The TRD040615T has a heating power of1500W, 3 power settings, safety thermostat, timer, cord storage and handles for easy transportation. Additionally, it features a new enlarged battery design: The 25% larger (compared to the current DRAGON3) radiant surface ensures a faster air flow emission and increased chimney effect which means better comfort.The reset button must be pushed on the plug.Please Note this product doesn't come with a remote It's sturdier and easier to clean than any other radiator we tested, with a shell-like exterior that remains relatively cool to the touch (for a radiator) and is easier to wipe down than that of most radiators, which typically feature bare fins that gather dust their in hard-to-reach depths. Low noise level when operating. Patented thermal chimneys provide maximum heat flows, keeping low surface temperature Packed with 1,500 watts of power, this DeLonghi model is perfect for medium to large rooms and the anti-freeze setting is an easy way to set a minimum temperature to prevent burst pipes during frigid cold fronts. Some Amazon customers have complained about the radiator giving off an unpleasant smell upon initial use Heat exhaust outlet can be hot enough to cause pain or a burn if touching the heat exhaust outlet. Switcher makes loud clicking sounds While radiators certainly have their benefits over traditional space heaters, they, too, have their own pitfalls and one of the main drawbacks is the amount of time it takes for them to heat a given space. Being cold is no fun. Whether it's a spot in your home that the heat just doesn't reach or an office that stays chilly year-round, sometimes a steady blast of warm air is exactly what you need to be comfortable. Space heaters are great for fulfilling that demand. Simply set one on the floor next to you and enjoy the warmth. But there are many factors to consider when you're picking out a space heater. The majority of house fires start because of portable space heaters, so it's important to choose one with built-in safety features. Look for heaters with auto shut-off and tip protection, especially if you have small children or pets in the house. You should also place your heater away from flammable objects, like drapes and bedding. Once you've squared away safety, you'll want to look for a space heater that provides the level of warmth you need. Some space heaters are designed to be directional in nature, primarily heating the area where they're pointed. However, many newer space heaters are less directional, warming an entire area and all the objects within it. If you're in a cubicle at work, you'll likely be more interested in heating yourself, whereas at home you may prefer to warm up an entire room. Portability and size are also important things to consider, especially if you won't be using your heater in the same space. Some heaters are small and portable, even coming equipped with carrying handles to make them easy to move around. These heaters are also usually smaller in size, making them handy for slipping under your desk to keep your feet warm while you work. Much larger units typically fit better if you're heating a whole room in your home rather than carrying them back and forth to the office every day. If you're looking for a whole room heater, make sure you get one with a temperature-based thermostat. Some space heaters have setting-based thermostats, which means an adjustment from low to high. With the Dr. Infrared heater, you can set the desired temperature, such as 65 or 70 degrees. The units will run until the area achieves that level of warmth, at which point they will shut off. The Andily Electric Space Heater does a better job of heating an individual sitting in front of it than similar heaters that are designed for whole-room heating. Although you'll always need to exercise caution when operating a space heater, many of today's models have safety features built in. Look for a heater that is certified as safe by the Underwriters Laboratories, with both automatic shut-off and anti-tip over protection. The Andily Electric Space Heater has an anti-tip over feature and other models include a non-slip base. Noise can be a concern, especially if you plan to operate your space heater in the workplace. The Dr. Infrared heater is notably quiet, using its own technology to provide heat at a low speed, which makes it less noisy than comparable space heaters. Size can be an issue, especially if you're tucking your heater discreetly under a desk. The Andily heater is lightweight and portable. Other heaters have a handle to make them easy to carry from one space to another. There are even space heaters that can be mounted on a wall. It's important to note that the Dr. Infrared heater has been known for thermal fuse failures. However, investing in a high-quality extension cord can keep that from happening, and if it does, the company will ship a new fuse upon request.
